

SQF Quality Audit Edition 9

Taizhou Beno Biotech Co., Ltd. - 105690

Summary

Audit Decision

Certified

Certificate Number

105690

Decision Date

July 20, 2026

Audit Type

Initial Certification

Recertification Date

June 14, 2027

On-Site Audit Dates

June 12, 2026 - June 14, 2026

Expiration Date

August 28, 2027

ICT Dates

-

Issue Date

July 20, 2026

Facility and Scope

Taizhou Beno Biotech Co., Ltd. - 105690

Li Kong Group 3, Donglin Village, Yaowang Street
Taixing City, 225400 China

Products

Pet Premix Food

Food Sector Categories

00. Quality

Scope of Certification

The mixing and packing of pet additive premixtures

Certification Body and Audit Team

Eurofins Food Assurance Certification US, LLC

2120 Rittenhouse Street
Suite A
Des Moines, IA 50321-3155 United States

CB#: 42241

Accreditation Body: ANAB

Accreditation Number: 9166

Lead Auditor: Kevin Zhu (C-512573)

Technical Reviewer: SHASHANK SHETH (C-467378)

Hours Spent on Site: 24

Hours of ICT Activities:

Hours Spent Writing Report: 8

Section Responses

Audit Statement - Audit

SQF Practitioner Name - Name the designated SQF Practitioner

Response: Ms. Ji Xinglan, QC Manager

SQF Practitioner Email - Email of the designated SQF Practitioner

Response: tzbeinuo@126.com

Opening Meeting - People Present at the Opening Meeting (Please list names and roles in the following format Name: Role separated by commas)

Response: Mr. Li Wang/GM, Mr. Zhou Guangwu/Technical Manager, Mr. Zhou Shenyong/Production Manager, Ms. Ji Xinglan/QC Manager, Mr. Rui Xiangou/Sales Manager, Gan Lili/Purchasing Manager, Kevin Zhu/Eurofins auditor

Facility Description - Auditor Description of Facility (Please provide facility description include # of employees, size, production schedule, general layout, and any additional pertinent details)

Response: Taizhou Beno Biotech Co., Ltd established in 2016. The factory has total area of 3000m2, in which 2000m2 for production and storage. There are 3 production lines in the factory and main products processed in the factory are solid pet additive premixed feed, semi-solid pet additive premixed feed & liquid pet additive premixed feed. The annual output of Y2025 is 30 million CYN. Currently all products are sold in domestic market. The factory has 30 employees working in single production shift (8:00-17:00) and 6 days per week. The factory's Business Operation License 91321283MA1MR5HB8P, updated on 2019-06-04, Production Approval license (2026)12006, valid from 2031-04-25.

Closing Meeting - People Present at the Closing Meeting (Please list names and roles in the following format Name: Role separated by commas)

Response: Mr. Li Wang/GM, Mr. Zhou Guangwu/Technical Manager, Mr. Zhou Shenyong/Production Manager, Ms. Ji Xinglan/QC Manager, Mr. Rui Xiangou/Sales Manager, Gan Lili/Purchasing Manager, Kevin Zhu/Eurofins auditor

Auditor Recommendation - Auditor Recommendation

Response: Recommended to get certificate after NCs closed.

2.1.1 - Management Responsibility

2.1.1.1 - Senior site management shall prepare and implement a policy statement that outlines the site's commitment to quality and includes at a minimum: i. Establishment and maintenance of a quality management system; ii. Compliance with customer, regulatory, and company quality requirements; iii. Identification of quality objectives and the methods used to measure them; and iv. Continuous improvement of its quality performance.

Response: Compliant

2.1.1.2 - The policy statement shall be displayed in a prominent position and communicated to all staff. It may be included in or separate from the organization's food safety policy.

Response: Compliant

2.1.1.3 - Senior site management shall implement, maintain, and continuously improve the quality culture within the site that ensures at a minimum: i. Quality objectives and key performance indicators are communicated to all staff; ii. Provision of adequate resources to meet the objectives and key performance indicators; iii. Awareness by all staff of their quality responsibilities and their accountability in meeting the requirements of the SQF Quality Code; iv. Responsibility to notify management of actual or pending quality issues and empowerment to resolve quality issues within their scope of work; and v. Education of all staff to understand the importance of quality controls and deviation consequences.

Response: Compliant

2.1.1.4 - Senior site management shall ensure the personnel performing key process steps and responsible for achieving quality objectives and meeting customer, regulatory, and company quality requirements are identified in the reporting structure and have the required competencies to carry out these functions.

Response: Compliant

2.1.1.5 - Job descriptions for personnel performing key process steps and responsible for achieving quality requirements shall be documented and include provisions for coverage in the absence of key personnel.

Response: Compliant

2.1.1.6 - Senior site management shall designate an SQF quality practitioner for each site with responsibility and authority to: i. Oversee the development, implementation, review, and maintenance of the SQF Quality System, including quality fundamentals outlined in 2.4.2 and the quality plan outlined in 2.4.3; ii. Take appropriate action to ensure the integrity of the quality system; and iii. Communicate to relevant personnel all information essential to ensure the effective implementation and maintenance of the quality system.

Response: Compliant

2.1.1.7 - The SQF quality practitioner shall: i. Be competent to implement and maintain food quality plans using a risk-based methodology such as HACCP; ii. Understand the Quality Code and the requirements to implement and maintain a quality management system; and iii. Be competent, through training or experience, in process control and/or other quality tools to reduce process variation impacting quality and achieve customer requirements.

Response: Compliant

2.1.1.8 - Senior site management shall develop and implement a quality communication program to ensure all staff: i. Know the site's quality statement, quality objectives, and the process by which quality performance is measured; and ii. Understand the methods by which customer, regulatory, and company quality requirements, where applicable, are met.

Response: Compliant

2.1.1.9 - Senior site management shall establish a process to trend progress in quality performance against agreed measures. Benchmarking shall be part of this process, and the performance data shall be reported at least annually, and communicated to all staff, to demonstrate effectiveness of the quality management system.

Response: Compliant

2.1.1.10 - Sites that are certified to the SQF Quality Code may use the SQF Quality Shield. The use of the quality shield shall follow the requirements outlined in Appendix 4: SQF Quality Shield Rules of Use.

Response: N/A

Evidence: • This is the initial audit, no SQF quality shield used.

Summary -

Response: Food safety and quality policy stated in Food safety and Quality Manual BN-SM-001, A/0, signed by GM on 2026-01-15, states: "Comply with regulations, focus on customer requirements, and continuously improve to provide customers with legal, safe, and high-quality products and services. Achieve efficient management and ongoing enhancement, and constantly strengthen the factory's food safety and quality culture." The policy has been communicated to all staff through noticeboard and training. Policy posted on the entrance of the workshop. Food safety culture procedure BN-PD-002, A/0, updated 2026-01-15, an action plan for implementing food safety culture was in place including multiple activities, such as training, a clear feedback mechanism, food safety knowledge contest, clear and open communication on product safety and the "Quality Improvement Proposal" activity every quarter. Related records sighted on site, such as the food safety culture investigation questionnaire dated 2026-05-10. The plan has been reviewed annually. The company assigned Ms. Ji (QC Manager) as SQF practitioner, and Mr. Li (GM) as substitute SQF practitioner, both hired by the company, and they all understood the SQF Food Safety Code by interview. The company's senior management has a process for assessing any concerns raised. Records of the assessment, and where appropriate actions taken, are documented in review records. This is an initial SQF audit the audit date from 2026-06-12 to 2026-06-14. No SQF quality shield used.

2.1.2 - Management Review

2.1.2.1 - Senior site management shall be responsible for reviewing the performance of the SQF Quality System. Reviews shall include actions required to: i. Monitor compliance to specifications; ii. Measure and reduce process and product variation; iii. Meet customer requirements; iv. Take appropriate corrective action where applicable; and v. Ensure sufficient resources are allocated to maintain and improve the performance of the quality system.

Response: Compliant

2.1.2.2 - The SQF quality practitioner(s) shall update senior site management monthly at a minimum on matters impacting the implementation and maintenance of the SQF Quality System. The updates and management responses shall be documented. The SQF Quality System in its entirety shall be reviewed at least annually.

Response: Compliant

2.1.2.3 - The quality system, including food quality plans, shall be reviewed when any changes are implemented that have an impact on the site's ability to meet customer requirements and/or corporate quality requirements where applicable.

Response: Compliant

2.1.2.4 - Senior site management shall ensure the integrity and continued operation of the quality system in the event of organizational or personnel changes within the company or associated facilities.

Response: Compliant

2.1.2.5 - Senior site management shall document and implement a change management process that details how changes in specifications, materials, equipment, or resources are evaluated for their impact on quality, communicated to customers, and effectively implemented.

Response: Compliant

2.1.2.6 - Records of all quality system reviews, reasons for amending documents, and changes to the SQF Quality System shall be maintained. Records shall include decisions for actions related to the improvement of the quality system and process effectiveness.

Response: Compliant

Summary -

Response: Management review procedure BN-PD-014, A/0, updated 2026-01-15, the management review meeting was required at least annually or when major changes, latest conducted 2026-04-11, hosted by GM Mr. Li, 2 improvement decisions raised in the final report with timescale, all in processing. The review process includes all measures needed for improvement: documents related to previous reviews, results of internal and external audits, objectives implementation, customer satisfaction (indicators, complaints, surveys), non-conformities / incidents, Corrective actions, effectiveness of the systems for HACCP, food defence and authenticity, resources, control of the processes. Food safety and quality objectives for 2026 established 2026-01-15, general target setup as: Customer satisfaction $\geq$ 90%, The product inspection pass rate $\geq$ 95%, no major food safety incident. Detailed food safety and quality objectives for each department divided and clear communication to relevant staff. Objectives are monitored and results reported monthly, latest record of Jan-May 2026 sighted, all objectives meet. SQF and quality meeting held monthly focused on matters impacting the implementation and maintenance of the SQF System, records sighted 2026-05-30, 2026-04-28, 2026-03-27.

2.1.3 - Complaint Management

2.1.3.1 - The methods and responsibilities for the complaint management process shall be documented and implemented. They shall include: i. A mechanism to collect and record all quality complaints resulting from activities at the site; and ii. Communication processes for reporting and follow-up with senior management and customers.

Response: Compliant

2.1.3.2 - Trends from quality complaints shall be included in the performance measures established for the quality system.

Response: Compliant

2.1.3.3 - Corrective and preventative action shall be implemented based on the seriousness of the incident and identified trends and shall be completed as outlined in 2.5.3.

Response: Compliant

2.1.3.4 - Records of quality complaints, their investigation and resolution, if applicable, shall be maintained.

Response: Compliant

Summary -

Response: Customer complaint procedure BN-PD-037, A/0, updated 2026-01-15 in place. Sales collected the complaint from customer and communicated with QC for root cause analysis and corrective actions. Trends analysis would carry out annually by QC department, interviewed the sales manager and QC manager, no customer complaint received in recent 12 months.

2.2.1 - Quality Management System

2.2.1.1 - Electronic and/or hard copy documentation that outlines the methods and procedures the site shall use to meet the requirements of the SQF Quality Code shall be current and maintained. It shall be made available to staff and include: i. A summary of the organization's quality policies and the methods it will apply to meet the

requirements of the SQF Quality Code; ii. The policy statement and site organization chart; iii. A list of the products covered under the scope of certification; iv. Finished product specifications that agree with customers' requirements and/or meet the site's corporate quality requirements, where applicable; and v. A description of the applications of process control methods and other quality tools that are used to control and reduce process variation and meet customer specifications. The quality system manual may be incorporated into or be independent of the food safety system manual.

Response: Compliant

Summary -

Response: Related documents have been established to maintain the SQF system, e.g. Food safety and quality manual BN-SM-001, A/0, 2026-01-15, HACCP plan BN-HACCP-01, A/0, 2026-01-15, Sanitation standard operation procedure (SSOP) BN-PD-007, A/0, 2026-01-15, Good manufacturing practice (GMP) BN-PD-008, A/0, 2026-01-15, and related procedures. The documents were reviewed regularly and the change log kept on file. Law and regulation collection list updated 2026-01-15.

2.2.2 - Document Control

2.2.2.1 - The methods and responsibility for maintenance, storage, and distribution of quality documents shall be documented and implemented.

Response: Compliant

2.2.2.2 - A register of current SQF Quality System documents and amendments to documents shall be maintained. Documents shall be safely stored and readily accessible.

Response: Compliant

Summary -

Response: The company established Food safety and quality manual BN-SM-001, A/0, 2026-01-15. The manual contains an outline of working methods and practices. All procedures and work instructions are available to related staff and in the Chinese. There is a procedure for the control of the documents, Ref: BN-PD-010, A/0, 2026-01-15. Documents are stored in electronic form and are stored securely and backed up to prevent loss. There is a list of controlled documents. Modifications are documented in the procedures, record dated 2026-01-15. The procedure for the control of the documents establishes the actions to be taken to rescind obsolete documentation. Documents sampled during the audit complied with the procedure requirements

2.2.3 - Records

2.2.3.1 - The methods, frequency, and responsibility for verifying, maintaining, and retaining records shall be documented and implemented.

Response: Compliant

2.2.3.2 - All records shall be legible and confirmed by those undertaking monitoring activities that demonstrate inspections, analyses, and other essential activities have been completed.

Response: Compliant

2.2.3.3 - Records shall be readily accessible, retrievable, and securely stored to prevent unauthorized access, loss, damage, and deterioration. Records shall be retained in accordance with periods specified by customers or regulations or, at a minimum, no less than the product shelf- life.

Response: Compliant

Summary -

Response: Record control procedure BN-PD-011, A/0, updated on 2026-01-15. The records are maintained and retained for 2 years at least, if the product shelf life longer than 2 years, the records are kept at least shelf life plus 1 year. They are readable and recoverable. Example of records checked during the traceability audit. There are NO electronic records.

2.3.1 - Product Formulation and Realization

2.3.1.1 - The methods for designing, developing, and converting product concepts to commercial realization shall include a comparison of process controls with specification limits (i.e., process capability analysis) to ensure that processes can consistently supply products that meet customer specifications.

Response: Compliant

2.3.1.2 - Product formulation, manufacturing processes, and the fulfillment of product quality requirements shall be validated by facility trials and product testing.

Response: Compliant

2.3.1.3 - Shelf life trials shall be conducted for new products, or when there are changes in materials, ingredients, or equipment, to establish and validate a product's packaging, handling, storage, and customer-use requirements through the end of its commercial life and consumer use.

Response: Compliant

Summary -

Response: New product development control procedure (BN-PD-017) in place, currently most of the product are customer brands, no new products developed recent years. Changes to products, packaging systems or manufacturing processes are included. All new products have been previously approved by the HACCP team leader or responsible person, target shelf life 24 months, shelf-life trials are undertaken to confirm the best before date established for all products, such as, Pet hair dissolving tablets, 2025-09-23, target shelf life 24 months, test from 2025-10-30 for sensory, moisture, etc.

2.3.2 - Specifications (Raw Material, Packaging, Finished Product and Services)

2.3.2.1 - Specifications for all raw materials and packaging, including but not limited to ingredients, additives, agricultural inputs (where applicable), hazardous chemicals, and processing aids that impact finished product quality shall be documented and kept current.

Response: Compliant

2.3.2.2 - Raw and packaging quality parameters shall be verified upon receipt to ensure they meet specifications.

Response: Compliant

2.3.2.3 - Product labels that are designed or specified by customers shall be approved by those customers. Records shall be maintained of customer approvals.

Response: Compliant

2.3.2.4 - The register of current raw material and packaging specifications shall include those raw material and

packaging materials that impact product quality and customer labels.

Response: Compliant

2.3.2.5 - Finished product specifications shall be documented, current, approved by the site and its customers when required, and accessible to relevant staff. The specifications shall include product quality attributes, service delivery requirements, and labeling and packaging requirements.

Response: Compliant

2.3.2.6 - Customer product specifications and delivery requirements shall be communicated to appropriate departments and staff within the site.

Response: Compliant

2.3.2.7 - Specifications for contract services that have an impact on in-process or finished product quality shall be documented, current, include a full description of the service to be provided, and detail relevant training requirements of contract personnel. The register of contract service specifications shall list those services impacting product quality.

Response: Compliant

Summary -

Response: The specifications of raw materials sampled are technically appropriate, complete and accurate, e.g. BN-ZL-001, A/0, 2026-01-15, including the specification for Chicken hydrolyzed powder, Fish hydrolyzed powder, fish oil, maltodextrin, glycerinum, pectin, vitamin, etc., and the specification for packaging material also included in BN-ZL-001, such as plastic bag, plastic bottle, aluminum tube, glass bottle. All specifications are available and up-to-date. The specifications of all finished products are available, EXAMPLE: Pet nutrition granules Q/321283 BNSW 9006-2026, dated 2026-05-28, Pet nutrition cream Q/321283 BNSW 016-2025, dated 2025-12-30, Pet nutrient solution Q/321283 BNSW 1001-2026, dated 2026-03-26. The specifications sampled meet all technical requirements needed. There are specifications agreed with customers through contracts. There is evidence available demonstrating that the specifications sampled have been agreed. The specifications have been reviewed every 3 years or in case of changes.

2.3.3 - Contract Manufacturers

2.3.3.1 - The methods and responsibility for ensuring all agreements with contract manufacturers relating to quality, site/customer product requirements, their realization, and delivery shall be specified, documented, agreed upon, and implemented.

Response: N/A

Evidence: • No contract manufacturers.

2.3.3.2 - The site shall: i. Ensure that the processes in place at the contract manufacturer are capable of consistently meeting customer and/or corporate quality requirements, where applicable; ii. Verify compliance with the SQF Quality Code and that all customer requirements are being met; iii. Audit the contract manufacturer annually, at a minimum, to verify compliance to the SQF Quality Code and with agreed arrangements, or accept the manufacturer's certification to the SQF Quality Code or equivalent; and iv. Ensure changes to contractual agreements are approved by both parties, agreed with customers when necessary, and communicated to relevant personnel.

Response: N/A

Evidence: • No contract manufacturers.

2.3.3.3 - Records of audits, contracts, and changes to contractual agreements and their approvals shall be maintained.

Response: N/A

Evidence: • No contract manufacturers.

Summary -

Response: NA. No contract manufacturers.

2.3.4 - Approved Supplier Program

2.3.4.1 - Raw materials, ingredients, packaging materials, processing aids, and services, including co-manufactured products, that impact finished product quality shall be supplied by an approved supplier.

Response: Compliant

2.3.4.2 - Material suppliers shall be selected and approved based on their ability to supply materials that meet quality specifications. The evaluation program shall require suppliers to: i. Maintain controlled and current copies of specifications; ii. Have processes that are capable of consistently supplying materials that meet specification and other defined quality metrics (e.g., delivery, service, etc.); iii. Provide evidence that the supplied product meets agreed specifications and metrics; and iv. Have a complaint management system in place that includes corrective actions processes.

Response: Compliant

2.3.4.3 - Materials supplied shall only be accepted by the site based on either a certificate of analysis for each lot received, or inspection of the lot at receipt, to ensure materials comply with specifications. All receipts shall be visually inspected for damage and product integrity.

Response: Compliant

2.3.4.4 - The approved supplier program shall include an agreement with suppliers for the return or disposal of materials that fail to meet specifications or are damaged or contaminated.

Response: Compliant

2.3.4.5 - Any supplier audits performed shall be conducted by individuals knowledgeable of applicable regulatory and food quality requirements and trained in auditing techniques.

Response: Compliant

Summary -

Response: Approved supplier list updated 2026-03-26, including raw material, packaging material and service providers. The specifications of materials sampled: RM receiving standard BN-ZL-001, A/0, 2026-01-15, include all raw material and packaging material. The specifications sampled meet all technical requirements needed. There are specifications agreed with customers through contracts. There is evidence available demonstrating that the specifications sampled have been agreed. The specifications have been reviewed every 3 years or in case of changes. Purchasing control procedure BN-PD-015, A/0, updated on 2026-01-15, defined the supplier approval method and purchase management. The supplier approved by the supplier audit or questionnaire based on the risk assessment. The supplier risk assessment record dated 2026-02-27, currently all suppliers were identified as low risk, and approved by supplier questionnaire. E.g. Sugar supplier Guangxi SS Sugar

Industry Co., LTD, questionnaire approved on 2026-01-20, collagen supplier TP Hebei Biotechnology Co., LTD, questionnaire approved on 2026-01-21, fish oil supplier Sichuan XMJ Biomedical Co., LTD, questionnaire approved on 2026-01-25, Chicken hydrolyzed paste and fish hydrolyzed paste supplier Jiangsu TY Biotechnology Co., LTD, questionnaire approved on 2026-01-25, vitamin supplier ZMLTS Yangzhou Animal Health Care and Nutrition Co., LTD, questionnaire approved on 2026-01-25, maltose supplier SQ Guangzhou Co., LTD, questionnaire approved on 2026-01-26. Emergency purchase requirement was defined in the purchasing control procedure, no emergency purchase occurred in last 12 months.

2.4.1 - Customer Requirements

2.4.1.1 - The methods and responsibilities for managing customer requirements and/or consumer expectations shall be documented and implemented. They shall include at a minimum: i. A review and approval process for all new or updated customer requirements, as they occur; ii. A process for collection and analysis of data for product quality attributes to ensure specifications continue to meet consumer expectations; and iii. A communication process to notify identified customers when the ability to supply compliant products is temporarily halted.

Response: Compliant

2.4.1.2 - Where customer products, materials, or equipment are used within the facility, the site shall have measures in place to safeguard customer property and ensure its correct and proper use.

Response: Compliant

Summary -

Response: Control procedures related to customers BN-PD-037, A/0, 2026-01-15 in place. All customer requirements are collected by sales and quality department. the procedure defined the management of customer's property.

2.4.2 - Quality Fundamentals

2.4.2.1 - The buildings and equipment shall be constructed, designed, and maintained to facilitate the manufacture, handling, storage, and/or delivery of food that meets customer specifications, regulatory requirements, and/or company quality requirements.

Response: Compliant

2.4.2.2 - The methods and responsibility for the calibration of measuring, test, and inspection equipment used for quality testing of raw materials, work-in-progress, and finished product, for food quality plans and other process controls, or to demonstrate compliance with customer specifications, shall be documented and implemented. Software used for such activities shall be validated as appropriate.

Response: Compliant

2.4.2.3 - Storage and transport of raw materials, work-in-progress, and finished product shall be suitable to maintain the integrity of the product without loss, waste, or damage and to meet customer requirements for inventory management and transportation, where applicable.

Response: Compliant

Summary -

Response: GMP, SSOP and quality control instruction in place.

2.4.3 - Food Quality Plan

2.4.3.1 - A food quality plan shall be developed, effectively implemented, and maintained in accordance with a risk-based method such as HACCP. The food quality plan may be combined with or independent from the food safety plan, but either way it must identify quality threats and critical quality points and their controls.

Response: Compliant

2.4.3.2 - The food quality plan shall outline how the site controls and assures the quality attributes of the products or product groups and their associated processes.

Response: Compliant

2.4.3.3 - The food quality plan shall be developed and maintained by a multidisciplinary team that includes the SQF quality practitioner and those site personnel with technical, production, and marketing knowledge of the relevant products and associated processes. Where the relevant expertise is not available on-site, advice may be obtained from other sources to assist the food quality team. The composition of the food quality team may be different from the food safety team.

Response: Compliant

2.4.3.4 - The scope of the food quality plan shall be developed and documented, including the start and endpoints of the processes under consideration and all relevant inputs and outputs.

Response: Compliant

2.4.3.5 - Product descriptions shall be developed and documented for all products included in the scope of the food quality plan. This shall include information in the finished product specifications (refer to 2.3.2.1) plus any additional quality or service attributes established by agreement with the customers.

Response: Compliant

2.4.3.6 - The intended use of each product shall be determined and documented. This shall include, as appropriate, target consumer groups, ease of use by consumers, consumer instructions, evidence of tampering, and other applicable information affecting product quality.

Response: Compliant

2.4.3.7 - The food quality team shall review the flow diagrams developed as part of the food safety plan and confirm and ensure process steps, process delays, and inputs and outputs that impact product quality are included.

Response: Compliant

2.4.3.8 - The food quality team shall identify and document all quality threats that can reasonably be expected to occur at each step in the processes, including raw materials and other inputs.

Response: Compliant

2.4.3.9 - The food quality team shall conduct a quality threat analysis for every identified quality threat to identify which threats are significant, i.e., their elimination or reduction to an acceptable level is necessary to ensure or maintain product quality. The methodology for determining threat significance shall be documented and used consistently to assess all potential quality threats.

Response: Compliant

2.4.3.10 - The food quality team shall determine and document the control measures that must be applied to all

significant quality threats. More than one control measure may be required to control an identified threat, and more than one significant threat may be controlled by a specific control measure.

Response: Compliant

2.4.3.11 - Based on the results of the threat analysis (refer to 2.4.3.9), the food quality team shall identify the steps in the processes where control must be applied to eliminate a significant threat or reduce it to an acceptable level. These steps shall be identified as Critical Quality Points or CQPs.

Response: Compliant

2.4.3.12 - For each identified CQP, the food quality team shall identify and document the quality limits that separate acceptable from unacceptable product. The food quality team shall validate the critical quality limits to ensure the designated level of control of the identified quality threat (s), and that all critical quality limits and control measures individually or in combination effectively provide the level of control required.

Response: Compliant

2.4.3.13 - The food quality team shall develop and document procedures to monitor CQPs to ensure they remain within the established limits (refer to 2.4.3.12). Monitoring procedures shall identify the personnel assigned to conduct testing, the sampling and test methods, and the test frequency.

Response: Compliant

2.4.3.14 - The food quality team shall develop and document deviation procedures that identify the disposition of affected product when monitoring indicates a loss of control at a CQP. The procedures shall also prescribe actions to correct the process step to prevent recurrence of the quality failure.

Response: Compliant

2.4.3.15 - The documented and approved food quality plan shall be fully implemented. The effective implementation shall be monitored by the food quality team, and a full review of the documented and implemented plans shall be conducted at least annually, or when changes to the process, equipment, specifications or inputs occur which may affect product quality.

Response: Compliant

2.4.3.16 - Implemented food quality plans shall be verified as part of SQF Quality System verification (refer to 2.5).

Response: Compliant

Summary -

Response: HACCP plan incorporating HACCP Principles of the Codex Alimentarius. Ref: BN-HACCP-01, A/0, updated on 2026-01-15, detailed with products for solid pet additive premixed feed, semi-solid pet additive premixed feed & liquid pet additive premixed feed, fully implemented on site. The scope of the HACCP system includes all products, processes and production site. The processes include raw vegetable reception, batching, mixing, emulsification (for semi-solid pet additive premixed feed), sterilization (semi-solid pet additive premixed feed & liquid pet additive premixed feed), molding (for solid pet additive premixed feed), filtering or sieving, filling, packing, ambient storage and dispatch. The HACCP team include GM Manager, QC Manager, Technical Manager, Sales Manager, Purchasing Manager, Supervisors and Operational staff. QC Manager Ms. Ji as HACCP team leader, who has more than 10 years' experience in food related industry, and received training on food safety knowledge. The HACCP team includes operational staff from different departments. Operational prerequisite programmes necessary to produce safe and legal products have been established, EXAMPLE: cleaning and sanitising, pest management, maintenance programmes for equipment and buildings,

personal hygiene, staff training, purchasing, transport, processes to prevent cross-contamination, allergen controls. The control measures and monitoring procedures for the prerequisite programmes are clearly documented. There is a product data sheet for each product, specifying composition, physical, organoleptic, chemical and microbiological parameters, legal requirements, methods of treatment, packaging, durability (shelf life), conditions for storage, method of transport and distribution, EXAMPLE: main raw material including chicken hydrolyzed paste, fish hydrolyzed paste, chicken hydrolyzed powder, fish hydrolyzed powder, additives; Significant product characteristic including the residues of pesticides and veterinary drugs, the content of heavy metals, the types and contents of additives, etc. should comply with the requirements of the state and the importing country, no infectious diseases, free of impurities, salmonella shall not be detected; Packaging including plastic bag, plastic bottle, glass bottle, aluminum tube; Ambient storage for 24 months; The intended use of the product is pet food for dogs and cats. Flow diagrams of products and processes are in place. The accuracy of the flow diagrams has been on site verified on 2026-02-28 by HACCP team. The frequency established is at least annually and whenever there are changes to the process. Hazard analysis has been completed from raw material, processing to final products, including of biological hazards, chemical hazards, physical hazards, radiological contamination, fraud, malicious contamination and allergen hazards. Likely occurrence of hazard and severity of the effects were considered during the hazard analysis. Significant hazard was defined and then decision tree was used to decide CCPs. The potential hazards were listed in the form of hazard analysis sheet of the HACCP plan. The significant food hazards are controlled through CCPs. A decision tree has been used to assess the hazard controls at each process step and the results were documented, and critical Limits for CCP were defined in HACCP plan. CCPs and other control measures (CPs) are identified. Details of CCPs: CCP1: batching, critical limit: food additives comply with national standard, monitor frequency: double check every batch; CCP2: sterilization, critical limit: 121° for 20-30 mins, monitor frequency: every batch. HACCP plan had been validated annually or before any change which can affect food safety, last annual validation on 2026-02-01. HACCP verification procedure was established and implemented and was addressed in the HACCP study. The latest verification record of 2026-03-10 was viewed on site audit.

2.4.4 - Product Sampling, Inspection and Analysis

2.4.4.1 - Processing parameters or in-process measurements shall be established, validated, and verified at a determined frequency to meet all customer, regulatory, and/or company requirements.

Response: Compliant

2.4.4.2 - On-site laboratories and inspection stations shall be equipped and resourced to enable testing of in-process and finished products to meet customer, regulatory, and/ or company requirements and meet quality objectives. External laboratories shall be accredited to ISO/IEC 17025 or an equivalent international standard and included on the site's contract service specifications list (refer to 2.3.2.7).

Response: Compliant

2.4.4.3 - Process control methods shall be used to effectively control and optimize production processes to improve process efficiency, product quality, and reduce waste. Control charts and/or other quality tools shall be used for control of key processes

Response: Compliant

2.4.4.4 - A sensory evaluation program shall be in place to ensure alignment with agreed customer and/or company requirements. Sensory evaluation results shall be communicated with relevant staff and with customers where appropriate.

Response: Compliant

2.4.4.5 - Records of all quality inspections and analyses and statistical analyses shall be maintained.

Response: Compliant

Summary -

Response: RM receiving and inspection procedure was documented and implemented, materials sampling method, inspection items, receiving method defined in the procedure. The RM receiving standard BN-ZL-001, A/0, updated 2026-01-15, FP inspection procedure BN-PD-031, A/0, updated on 2026-01-15 and FP release procedure BN-PD-032, A/0, updated on 2026-01-15. The company undertakes the analysis of parameters defined in the product specifications, including physical, chemical and microbiological parameters. The analyses performed internally and/or subcontracted. A test plan has been drawn up for raw materials and finished products. External test report for RM sampled: Chicken hydrolyzed powder test report 2026041511, issued 2026-04-18, result meet Q/WING004-2020. Maltodextrin test report A2250636687101003ER1, issued 2025-09-10, result qualified. PET bottle test report 2613402589, issued 2026-04-25, result meet Q/NJA 001-2025. Glass bottle test report 20260604, issued 2026-06-05, result meet YB/QESC(02)042-2025. External FP test report sighted: Semi-solid pet additive premixed feed test report number NNAR66TK86338509, issued 2026-03-28, test items including moisture, Pb, As, Vitamin, folic acid, result OK. Lecithin Hair Care Granules test report issued 2026-03-28, test items including moisture, Pb, As, Vitamin, folic acid, result OK. Blood-Boosting Nutrient Solution test report issued 2026-03-21, test items including moisture, Pb, As, Vitamin, folic acid, result OK. The analysis frequency and method are defined in the test plan. The company has provided documented evidence demonstrating that the analytical results have been verified by a responsible person, QC MANAGER. Evidence provided of an assessment of trends from analytical results. On-going shelf-life assessments are in place. Physical-chemical, microbiological and organoleptic criteria are assessed, e.g., Pet hair dissolving tablets shelf life 24 months. All production records are required to be kept for 3 years.

2.4.5 - Non-conforming Materials and Product

2.4.5.1 - Non-conforming product shall include products that fail to meet in-process or product requirements for quality. Non-conforming product shall be suitably identified, segregated, and appropriately dispositioned with records maintained.

Response: Compliant

2.4.5.2 - Non-conforming equipment shall include equipment that is not suitable for use and/ or is not capable of producing products that meet in-process or product requirements for quality. Non-conforming equipment shall be identified and segregated from production areas, if possible, with appropriate documentation maintained.

Response: Compliant

2.4.5.3 - The site shall document and implement a procedure to accept returned product that does not meet finished product specifications. The procedure shall include identification, handling, and disposition of returned goods to prevent redistribution or contamination of other products.

Response: Compliant

Summary -

Response: Non-conforming product control procedure in place. The procedure includes information of product non-conformities, persons responsible for decision making, answer to the customers, records of actions taken. Records are maintained sighted 2025-04-07. Position with authority for releasing product: by

general manager.

2.4.6 - Product Rework

2.4.6.1 - Procedures shall be documented and implemented to ensure product quality or formulation is not compromised by the rework process. Material to be reworked shall be identified and traceable. Rework operations shall be overseen by qualified personnel.

Response: Compliant

Summary -

Response: Rework instruction (BN-PD-034) in place. No rework happened stated by production manager.

2.4.7 - Product Release

2.4.7.1 - The site shall document and implement a positive product release procedure to ensure that, at the time of delivery to its customer, the food supplied complies with all agreed customer, regulatory, and/or company requirements, including but not limited to product specifications, sensory attributes, packaging and package integrity, labeling, delivery, and service requirements.

Response: Compliant

2.4.7.2 - Records of all product release or disposition shall be maintained

Response: Compliant

Summary -

Response: QC manager responsibility for product release, product released after inspection. Inspection record sighted 2026-01-25 for semi-solid pet additive premixed feed, 2026-05-22 for Solid pet additive premixed feed and 2025-06-02 for liquid pet additive premixed feed.

2.5.1 - Validation and Effectiveness

2.5.1.1 - Validation activities shall include those necessary to authenticate critical quality limits, process controls, and other quality tests established to meet customer requirements.

Response: Compliant

2.5.1.2 - Records of validation of quality criteria shall be maintained.

Response: Compliant

Summary -

Response: Flow diagrams are in place including all products and processes. They are dated 2026-01-15. CCPs are identified, numbered and updated. The accuracy of the flow diagrams has been verified by on-site inspections. HACCP plan had been validated annually or before any change which can affect food safety, last annual validation on 2026-02-01.

2.5.2 - Verification Activities

2.5.2.1 - The verification schedule shall include activities designed to ensure the effectiveness of process controls and quality tests.

Response: Compliant

2.5.2.2 - The methods, responsibility, and criteria for verifying the effectiveness of monitoring critical quality points and other process and quality controls shall be documented and implemented. The methods applied shall ensure that personnel with responsibility for verifying monitoring activities authorize each record.

Response: Compliant

2.5.2.3 - Verification activities shall include a comparison between process control limits and specification limits to ensure alignment and appropriate process control corrections.

Response: Compliant

2.5.2.4 - Records of the verification of quality activities shall be maintained.

Response: Compliant

Summary -

Response: The HACCP verification activities are defined. There is an HACCP verification report during last year, e.g., 2026-03-10. The company defined the food safety plan review to be carried out at least annually and always when changes (to raw materials or suppliers, ingredients, etc.). Example of last review 2026-03-10.

2.5.3 - Corrective and Preventative Action

2.5.3.1 - Corrective and preventative action methods shall include the identification of the root cause(s) and the resolution of non-compliance of critical quality limits and deviations from quality requirements.

Response: Compliant

Summary -

Response: The company has a documented procedure for correction actions, REF: BN-PD-035, A/0, 2026-01-15. A documented record of the non-conformances include description, assessment of consequences by a competent and authorised person, cause, immediate action, corrective action, responsible staff and deadlines for implementation. The corrective actions checked during the audit were adequately verified, the relevant staff were trained about personal hygiene and inspections related to it were performed, the completion of root cause analysis and it is implemented.

2.5.4 - Internal Audits

2.5.4.1 - Internal audit plans and methods shall include assessments of food quality plans, process controls, quality tests, and other activities implemented to meet finished product specifications as well as customer and company requirements.

Response: Compliant

2.5.4.2 - Staff conducting the quality internal audits shall be trained and competent in internal audit procedures and have knowledge and experience in quality processes and process control methods as they relate to the scope of certification. Where practical, staff conducting internal audits shall be independent of the function being audited.

Response: Compliant

Summary -

Response: The internal audit procedure (BN-PD-013, A/0, 2026-01-15) was established covering audit planning, audit team qualification. The facility scheduled SQF internal audit once a year. The last internal audit plan was done on 2026-03-01/02 by 2 internal auditors in which all SQF requirements covered. Internal audit team members are appointed and got training on SQF standard. All the auditors were independent and not audit their own work. Internal audit plan and Checklist showed that cross audit conducted. The internal audit records as following, internal audit plan, internal audit checklist, non-conformity corrective action report, internal audit report, signature record of the internal audit meeting. Total 2 minor NCs were raised in the internal audit. The responsible person and deadline for corrective action were defined, the performance of the corrective actions was monitored by internal audit team. Briefing checklist to each department, area or functions is available, and evidence on conformity was included and seen.

2.6.1 - Product Identification and Traceability

2.6.1.1 - Finished product shall be labeled to the agreed customer, regulatory, and/or company requirements.

Response: Compliant

2.6.1.2 - Product changeover procedures shall include verification of quality attributes required to meet finished product specifications and customer requirements.

Response: Compliant

2.6.1.3 - Finished product shall be traceable forward to the customer, such as the retailer, distributor, or manufacturer (one forward).

Response: Compliant

2.6.1.4 - All raw materials, ingredients, and packaging materials used in manufacturing a finished product and processing aids associated with the product shall be identified with the finished product lot number and traceable back to the supplier (one back).

Response: Compliant

Summary -

Response: Product identification and traceability control procedure (BN-PD-040, A/0, 2026-01-15) was in place to ensure the complete traceability for tracing materials from raw material to finished product and vice versa. The traceability was conducted once per year. The manufacturing lot number has been linked to the production records. Example of records verified: reception, intake, processing, packaging and labelling, storage and dispatch record. An effective system for the identification of all products has been demonstrated. No production changeover carried out when auditing. Production line changeover record sighted 2026-05-22, with all materials and packaging cleared.

2.6.2 - Product Withdrawal and Recall

2.6.2.1 - The site's recall and withdrawal procedures shall apply to product recalled or withdrawn due to failure to meet customer specifications or corporate quality requirements. Records shall be maintained and meet customer, regulatory, and company requirements, as applicable.

Response: Compliant

Summary -

Response: Product withdrawals or recalls have NOT occurred in last year. A documented product

withdrawal/recall procedure has provided, Ref: BN-PD-041, A/0, 2026-01-15. It includes: recall management team, responsibilities, guidelines for deciding the need for product withdrawal/recall, guidelines for actions to be taken, emergency and customer contact data, communication plan, external agencies. Recall or withdraw is required to review and test annually, latest mock recall carried out 2026-06-01, record sighted. Procedure has not defined that SQFI and CB should be notified in writing within twenty-four (24) hours if any emergency or food safety issues happen, this was a Minor NC raised in clause 2.4.1.

2.6.3 - Crisis Management

2.6.3.1 - The crisis management plan prepared by senior site management shall include the methods by which the site shall, in the event of a crisis, maintain continuity of supply that meets customer, regulatory, and/or company product and service quality requirements.

Response: Compliant

2.6.3.2 - The site shall contact its customers in the event of a crisis that impacts its ability to supply quality product.

Response: Compliant

Summary -

Response: The company have procedures for the management of incidents and emergency situations, Ref: BN-PD-016, A/0, 2026-01-15. The following incidents: disruption to key services, disasters and sabotage, product contamination and digital cyber security have been taken into account. Actions plans are established. There is a crisis management team led by GM and a key contact list established. The crisis plan has been tested at least annually, last test for the emergency of Power outage dated 2026-03-27.

2.7.1 - Food Fraud

2.7.1.1 - The food fraud vulnerability assessment shall include the site's susceptibility to ingredient or product substitution, mislabeling, dilution, and counterfeiting that could adversely impact food quality. This assessment may address both food safety and quality.

Response: Compliant

2.7.1.2 - A food fraud mitigation plan shall be developed and implemented that specifies the methods to be used for controlling identified food fraud vulnerability that could adversely impact food quality.

Response: Compliant

Summary -

Response: Systems are in place to minimize the risk of purchasing fraudulent or adulterated food raw materials and to ensure that all product descriptions and claims are legal, accurate and verified. Responsible for fraud management is defined: HACCP team. The responsible person demonstrates sufficient training in fraud. The company has processes in place to access information on historical and developing threats to the supply chain which may present a risk of adulteration or substitution of raw materials. There is a food fraud vulnerability analysis about raw materials and outsourced processes, record dated 2026-04-12 sighted. Criteria used for vulnerability assessment: historical of adulteration, economic factors, ease of access to raw materials, sophistication of routine testing to identify adulterants, the nature of the raw material. Fraud-susceptible products have not been identified. The assessment is adequate. It is established to review the plan: every year or change in raw materials or a supplier of raw materials or emergence of a new risk or a significant product safety incident. Preventive measures have been defined to mitigate food fraud risk, e.g.: supplier evaluation,

control on reception, etc. Food fraud mitigation plan updated 2026-04-12, food fraud mitigation plan is implemented.

2.8.1 - General Requirements for Identity Preserved Foods

2.8.1.1 - The methods and responsibility for the identification, label approval, and processing of food and other products requiring the preservation of their identity preserved status (e.g., Kosher, Halal, organic, GMO free, regional provenance, free from, free trade, etc.) shall be documented and implemented.

Response: N/A

Evidence: • No product requiring the preservation of their identity preserved status.

2.8.1.2 - Identification shall include a statement of the product's identity preserved status of all ingredients, including additives, preservatives, processing aids, and flavorings.

Response: N/A

Evidence: • No product requiring the preservation of their identity preserved status.

2.8.1.3 - Raw material and ingredient specifications for identity preserved foods shall include requirements for their handling, transport, storage, and delivery prior to use.

Response: N/A

Evidence: • No product requiring the preservation of their identity preserved status.

2.8.1.4 - Assurances concerning the raw material or ingredient's identity preserved status shall be by agreement with the supplier of the material.

Response: N/A

Evidence: • No product requiring the preservation of their identity preserved status.

2.8.1.5 - The process description shall allow for a product's identity preserved status to be maintained during manufacturing.

Response: N/A

Evidence: • No product requiring the preservation of their identity preserved status.

2.8.1.6 - The processing of identity preserved foods shall be conducted under controlled conditions such that: i. Ingredients are physically separated from ingredients identified as incompatible with the identity preserved food; ii. Processing is completed in separate rooms, scheduled as the first production run, or carried out after completion of thorough sanitation of the processing area and equipment; and iii. Finished product is stored and transported in separate units or isolated by a physical barrier from the non-specialty product.

Response: N/A

Evidence: • No product requiring the preservation of their identity preserved status.

2.8.1.7 - The identity preserved status shall be declared in accordance with regulatory requirements.

Response: N/A

Evidence: • No product requiring the preservation of their identity preserved status.

2.8.1.8 - Additional customer-specific requirements for identity preserved foods shall be included in the finished product specification, as described in 2.3.2.5, or the label register and implemented by the site.

Response: N/A

Evidence: • No product requiring the preservation of their identity preserved status.

Summary -

Response: NA. No product requiring the preservation of their identity preserved status.

2.9.1 - Training Requirements

2.9.1.1 - Appropriate training shall be provided for personnel carrying out the tasks critical to the effective implementation of the SQF Quality System and the maintenance and improvement of quality requirements.

Response: Compliant

2.9.1.2 - Instructions shall be available explaining how all tasks critical to meeting customer and company specifications and quality and process efficiency are to be performed.

Response: Compliant

Summary -

Response: QC department is response for the training plan and implementation.

2.9.2 - Training Program

2.9.2.1 - The employee training program shall include the necessary competencies for specific duties and the training methods to be applied for those staff carrying out tasks associated with: i. Process control and monitoring of critical quality points (CQPs); ii. Steps identified as critical to effective implementation of the food quality plan and the maintenance of food quality; and iii. Product inspection and testing.

Response: Compliant

2.9.2.2 - The employee training program shall include: i. Applicable process control and quality tools training for those responsible for operating, inspecting, and overseeing key manufacturing processes; ii. Training, calibration, and proficiency testing of internal laboratory personnel; iii. Training of personnel responsible for sensory evaluations; iv. Training in the application of risk-based principles, such as HACCP, used for the identification and control of quality threats for staff involved in developing and maintaining the food quality plan; and v. Provision for identifying and implementing the refresher training needs of site personnel.

Response: Compliant

2.9.2.3 - Training records shall be maintained and include: i. Participant name; ii. Skills description; iii. Description of the training provided; iv. Date training completed; v. Trainer or training provider; and vi. Verification that the trainee is competent to complete the required tasks.

Response: Compliant

Summary -

Response: The company demonstrated that the employees are competent and that they are adequately trained and supervised. During the audit, the following positions have been interviewed: lab analyst, CCP operator, warehouse storekeeper. Documented training has been delivered to personnel in charge of CCPs. E.g.: sterilization training date 2026-03-07. During the appropriate interview, personnel in charge of CCPs have demonstrated their adequate knowledge. The company has a training plan in place (with respect to the product and the process) for all employees, REF: training program 2026. This plan includes training contents,

frequency, tasks by the employee to be trained, language, trainer and evaluation methodology. The training records have been provided. The training records include: signatures of the participants, contents, date, duration, trainer. E.g. HACCP/CCP training on 2026-03-07, personal hygiene training on 2026-03-02, food defense training on 2026-02-25, food fraud training on 2026-06-01, allergen control training on 2026-05-18, sampling and testing procedure training on 2026-04-01.
